Environmental policy

Interal offers sales, processing and assembly of aluminium components.

We will conduct our operations with consideration to the environment and work towards energy efficiency, reduced greenhouse gas emissions and better use of natural resources.

We are committed to protecting the environment and preventing pollution of land, water and air. We shall comply with applicable laws and other requirements relevant to our operations.

We also commit to the continuous improvement of our environmental management system to enhance our environmental performance.

Environmental considerations are integrated into our selection of suppliers and raw materials, our production and internal processes, and our customer interactions. Wherever possible, we offer our customers environmentally preferable products.

The use of aluminium is one of our most significant environmental aspects, as its production is energy intensive. Therefore, we will:

- optimize purchasing to reduce production waste
- maintain high quality to minimize scrap
- sort scrap fractions to promote recycling
- recommend aluminium with a high recycled content to our customers

The management is responsible for leading the company's environmental improvement efforts. All employees are encouraged to contribute ideas and improvements.
